Introduction

“We're proud of our reputation for technical excellence.”

Founded in 2013 and headquartered in Naples, Italy, FGM Solar has grown into a multi-disciplinary solar construction company with a reputation for engineering and technical excellence, professionalism, integrity and responsiveness. Our teams of technicians and engineers work across four continents and have assessed more than 2,300 MWp of solar projects.

We work on solar projects of every size, from off-grid systems designed for remote locations to some of the world's largest developments, across all terrains and environments. We provide full project management and support, helping you reduce risk and plan, design and operate your renewable project profitably and with confidence.

Our services

Six disciplines, one contractor. We take on the whole scope or the single activity you are missing, with our own machines and our own crews.

01

Drilling and perforations

Every kind of rock, with our own rigs and 25 years behind them.

02

Ramming and piling

Seven ramming machines, ready to ship anywhere.

03

Mechanical construction

From the first pile to the last module.

04

Electrical activities

Low voltage, trenching, cabling and commissioning.

05

Project construction management

End-to-end ownership of your construction phase.

06

Feasibility studies and pull-out tests

The ground tested before the design is fixed.

Drilling and perforations

We founded a dedicated company for drilling and perforations. Our crews drill every type of rock and carry out the work with current technology, backed by 25 years of experience. Our fleet includes two Comacchio drilling rigs, the MC 600 and the MC 800, and a range of Atlas Copco compressors covering every air-flow requirement.

- Drilling
- Pre-drilling
- Micropiling
- Ground consolidation

Compressor fleet

Ramming and piling

We own seven ramming machines and two drilling rigs, all ready to be shipped anywhere. Quality is everything: we work with MGI ramming machines, and we are currently testing a new generation from Macchine Generali Irpine — faster and more efficient than anything we have run before.

Mechanical construction

Since our first projects we have focused on results, on quality and on speed. We provide a complete mechanical installation service, from the ramming of the posts to the installation of the modules.

- Ramming of posts and concrete foundations
- Installation of the mounting structure
- Installation of inverter structures
- Installation of modules

Electrical activities

Over the years FGM has built extensive experience across mechanical, civil and electrical works. We operate with a 360° approach, with the skills to take a project from start to finish.

- Low voltage works
- Excavation of DC/AC trenches
- Laying of DC, AC, MV and fibre-optic cables
- Termination of LV cables
- Earthing system
- Monitoring system
- CCTV system
- Concrete foundations for stations, structure ballast
- String combiner boxes and string inverters
- Commissioning of inverters, transformer and transfer stations

Project construction management

We take complete end-to-end ownership of the construction management of your project, working in partnership with you to deliver on time and within budget. Alternatively, we provide the specific technical services your project management team is missing. Our work starts during the construction phase and extends to schedule and budget evaluations, including accuracy checks on cost estimates.

- Project management, owner's engineer
- Site management
- Logistics management
- Purchasing management
- On-site construction monitoring
- Quality assurance inspections
- Civil and structural engineering advice

Feasibility studies and pull-out tests

We carry out feasibility studies and pull-out tests on the terrain, so that the technical approach is chosen on measured data rather than assumptions. Our people are our greatest asset: their practical expertise and impartial advice reduce risk and protect the delivery of the project.

PULL-OUT TESTS PERFORMED (MWP)

Our companies

Over the years FGM has expanded its operations, leading to two further companies which together form the FGM Solar Group. The growth let us diversify what we offer and deepen our expertise across several disciplines. Each company brings its own specialist knowledge and its own equipment to the group.
